These condensed consolidated interim financial statements were authorized for issue by the Board of Directors on November 13, 2020.

These condensed consolidated interim financial statements have been prepared on the basis of accounting principles applicable to a going concern, which assume that the Company will continue operations for the foreseeable future and will be able to realize its assets and discharge its liabilities in the normal course of operations as they come due. For the nine months ended September 30, 2020, the Company incurred a net loss of \$698,801. As at September 30, 2020, the Company has \$35,740,944 in cumulative losses since inception and working capital deficiency of \$196,986. The Company does not generate cash flows from operations and accordingly, the Company will need to raise additional funds through the issuance of securities, resource secured debt or joint venture projects. Although, the Company has been successful in raising funds in the past there can be no assurance that the Company will be able to raise sufficient funds in the future, in which case the Company may be unable to meet its obligations as they come due in the normal course of business. The Company is subject to sovereign risk, including political and economic instability, changes in existing government regulations relating to mining, as well as currency fluctuations and local inflation. These factors are material uncertainties that may cast significant doubt regarding the Company's ability to continue as a going concern. Should the Company be unable to realize its assets and discharge its liabilities in the normal course of business, the net realizable value of its assets may be materially less than the amounts on the statement of financial position.

In March 2020, the World Health Organization declared coronavirus COVID-19 a global pandemic. This contagious disease outbreak, which has continued to spread, and any related adverse public health developments, has adversely affected workforces, economies and financial markets globally, potentially leading to an economic downturn. It is not possible for the Company to predict the duration or magnitude of the adverse results of the outbreak and its effect on the Company's business or ability to raise funds.
